Effective July 1, 2014, the Guarantor employs the methodology set out below to determine the indexed valuations for Properties relating to the Loans in the Covered Bond Portfolio (the "Indexation Methodology") for purposes of the Asset Coverage Test, the Amortization Test, the Valuation Calculation and in calculating the value of the covered bond collateral held as Contingent Collateral. To account for subsequent price developments, the Guarantor has choser to adjust the original market values of the Properties securing the Loans in the Covered Bond Portfolio by using the Teranet - National Bank House Price IndexTM and the Teranet - National Bank Regional and Property Type Sub-IndicesTM, available by subscription at www.housepriceindex.ca (CIBC does not endorse or accept any responsibility for such sites or their content, privacy policy or security standards. See our terms of use at www.cibc.com/ca/terms-ofuse.html for more details).

The Teranet - National Bank House Price IndexTM is an independent representation of the rate of change of Canadian single-family home prices. The measurements are based on the property records of public land registries, where sale price is available. The Teranet - National Bank Regional and Property Type Sub-IndicesTM is an independent representation of the rate of change of Canadian home prices based on property types and regional characteristics. For each region, the Teranet - National Bank Regional and Property Type Sub-IndicesTM classifies properties into three categories (condo, row housing, single family) and provides an all-types combined index. As of the indicated Calculation Date, for each region, the all-types index is available and has been used.

The relevant sub-indices are used to maintain updated market property values. At least quarterly, Property values are updated based on relative changes in sub-indices from the time of original valuation, and used in calculating the loan to value ratios. Properties in geographical areas not covered by the Teranet – National Bank Regional and Property Type Sub-IndicesTM are adjusted with the national average index, as captured by the Teranet – National Bank House Price IndexTM. At this time, New Brunswick, Saskatchewan and Prince Edward Island are not covered by the sub-indices. Material risks associated with using the Indexation Methodology include, but are not limited to, the factual correctness of the indices being relied upon, and, in the case of geographical areas not covered by the sub-indices, the risk that the Teranet - National Bank House Price IndexTM may not accurately capture idiosyncratic factors affecting local housing markets.

As per the Canadian Registered Covered Bond Programs Guide (June 23, 2017) and pursuant to the definition of Indexation Methodology in the Master Definitions and Construction Agreement, notice of any change in the Indexation Methodology must be provided to CMHC and will be reflected in the then-current Investor Report. Changes to the Indexation Methodology may only be made (i) upon notice to CMHC and satisfaction of any other conditions specified by CMHC in relation thereto, (ii) if such change constitutes a material change, subject to satisfaction of the Rating Agency Condition, and (iii) if such change is materially prejudicial to the Covered Bondholders, subject to the consent of the Bond Trustee. The Indexation Methodology must at all times comply with the requirements of the CMHC Guide
